

New combinations in Thai Convolvulaceae

GEORGE STAPLES*

ABSTRACT. Two new combinations are made in Thai Convolvulaceae, *Argyreia siamensis* and *Tridynamia bialata*.

Two new combinations are necessary so that the names will be available for a checklist of Thai Convolvulaceae to be published elsewhere in the *Thai Forest Bulletin (Botany)*. Additional new combinations in *Argyreia* are published separately.

Argyreia siamensis (Craib) Staples, **comb. nov.**— *Ipomoea siamensis* Craib, Kew Bull. Misc. Inform. 1911: 424. 1911. Type: Thailand, Chiang Mai, Doi Suthep, *A. F. G. Kerr* 1401 (isotypes BM, K!).

It is curious that the fruits of this species had never been collected until recently, although there is ample flowering material of it to be found in several herbaria. In 1999 Patrick Blanc, CNRS, Paris, and in 2002 Atchara Teerawatananon, Chiang Mai University, Thailand independently collected fruits that show this species belongs in *Argyreia*. The latter collection was not vouchered.

Thailand.— NORTHERN: Chiang Mai, Lamphun, Sukhothai [Wat Chedi Ngam, *P. Blanc* 99-301 (P, photo seen); same loc., *P. Blanc* 01-20 (P)]; Kamphaeng Phet; Nakhon Sawan. SOUTH-WESTERN: Kanchanaburi.

Tridynamia bialata (Kerr) Staples, **comb. nov.**— *Porana bialata* Kerr, Bull. Misc. Inform. 1941: 19. 1941. Type: Thailand, Prachuap Khiri Khan, Huai Sang, *Put* 3166 (isotypes A!, ABD!, BK!, BM!, E!, K!, L!).

This species, known from a mere six Thai collections (and only a dozen collections in total), is one of the rarer Convolvulaceae in Southeast Asia. The most recent Thai collection was made in 1975 and the current status of the species is unknown.

Thailand.— SOUTH-WESTERN: Ratchaburi [mts W of Huai Yang, *Larsen, Smitinand & Warnecke* 1529 (AAU)]; Prachuap Khiri Khan [Kan Kradao, *Put* 2326 (A, ABD, BK, BM, K, L)]; Phetchaburi [Me Prachan, *K. Winit* 406 (K, sketches BM)]; SOUTH-EASTERN: Chonburi [Bahn Beung (Banbeung) distr., Ta Jahm, *Maxwell* 75-1081 (AAU, BK, L)]; Siricha (Sri Racha) distr., Khao Khiao (Khao Khiao), *Maxwell* 75-953 (AAU, BK, L)].

ACKNOWLEDGEMENTS

I thank Thierry Deroin (Paris) for making the Blanc specimens and photos known to me and the curators of the cited herbaria for the use of collections in person and via loans. Roy Vickery kindly verified that a sheet of *Kerr* 1401 is in BM. An anonymous reviewer and David Simpson (K) offered suggestions for improving the manuscript. This material is based upon work supported by the U.S. National Science Foundation under Grants BSR 85-00832 and 0212762.
