**ABSTRACT.**— *Dendrolobium* includes seven species and eight taxa in Thailand, viz. *D. baccatum*, *D. lanceolatum* (var. *lanceolatum* and var. *microcarpum*), *D. olivaceum*, *D. rugosum*, *D. thorelii*, *D. triangulare* and *D. umbellatum*. Four names are lectotypified, including *Lespedeza lanceolata*, *Desmodium wallichii*, *Desmodium cephalotoides* and *Desmodium umbellatum* var. *costatum*. Two names are reduced to synonymy, i.e., *Lespedeza cambodiana* under *Dendrolobium lanceolatum* and *Dendrolobium rugosum* var. *moniliferum* under *Dendrolobium rugosum*.

**KEY WORDS:** *Desmodium*, *Desmodieae*, *Fabaceae*, *Papilioideae*, taxonomy

### INTRODUCTION

*Dendrolobium* was described by Bentham (1852). The species belonging to this genus have often been treated under *Desmodium* Desv. in various taxonomic categories, including *Desmodium* sect. *Eudesmodium* (De Candolle, 1825), *Desmodium* subgen. *Dendrolobium* (Wight & Arnott, 1834), and *Desmodium* sect. *Dendrolobium* (Bentham, 1864). Nowadays, *Dendrolobium* is accepted again in several taxonomic works (e.g., Ohashi, 1973, 1998 & 2004; Pedley, 1999). The genus is characterized by its racemose inflorescence with dense flowers and by its fruits which have a thick and hard pericarp, compared with fruit pericarp of other genera in tribe Desmodieae. There are about 18 species of *Dendrolobium*, and they are mostly distributed in Asia and Australia. A few species extend their distributions to Africa (Ohashi, 1973, 1998, 2004, 2005; Pedley, 1999; Ohashi, 2005). For Thailand, this is the first taxonomic revision for genus

*Dendrolobium* and it is a contribution to the progress of the Flora of Thailand project.

### MATERIALS AND METHODS

The taxonomic study of genus *Dendrolobium* in Thailand is based on specimens from various herbaria viz. AAU, ABD, BCU, BK, BKF, BM, BO, C, CMU, CMUB, E, FOT, G, G-DC, HN, HNL, HNU, K, KEP, KKU, K-W, KYO, L, NOUL, P, PSU, QBG, SING and TI. Online photographs of specimens deposited at A, BR, LD, MO, NY, P and US were also examined. The herbarium acronyms are followed Thiers (continuously updated). The NOUL abbreviation used here is for the herbarium of the Faculty of Sciences, National University of Laos, Laos. This study is also based on field surveys in various parts of Thailand during which plant specimens were collected and deposited mainly at the KKU herbarium.

## RESULTS

### Taxonomic treatment

**DENDROLOBIUM** (Wight & Arn.) Benth. in Jungh. & Miq., Pl. Jungh. 2: 215. 1852. Type species: *Dendrolobium umbellatum* (L.) Benth.—*Desmodium* sect. *Eudesmodium* DC., Prodr. 2: 325. 1825, pro parte.—*Desmodium* subgen. *Dendrolobium* Wight & Arn., Prodr. Fl. Ind. Orient. 1: 223. 1834.—*Desmodium* sect. *Dendrolobium* (Wight & Arn.) Benth., Fl. Austral. 2: 229. 1864.

Small to large shrubs. Leaves ±alternately arranged, stipulate, stipellate, 3-foliolate; venation pinnately veined; petioles unwinged. Inflorescences shortly racemose or paniculate, terminal or axillary; each inflorescence node with 1 flower; primary bract absent; secondary bract 1; bracteoles 2. Flowers densely arranged in a head-like partial inflorescence; calyx connate, 4-teethed; corolla of 5 petals; stamens 10, monadelphous; ovary with 1 carpel. Pods indehiscent, laterally compressed or moniliform, straight or slightly curved, usually

with persistent calyx; pericarp thick and hard.

About 18 species distributed in Asia and Australia with a few species reaching Africa. Seven species are native to Thailand.

1. ***Dendrolobium baccatum*** (Schindl.) Schindl. in Fedde, Repert. Spec. Nov. Regni Veg. 20: 278. 1924.—*Desmodium baccatum* Schindl. in Engl., Bot. Jahrb. Syst. 54(1): 59. 1916. Type: Cambodia. Talmey 127 [lectotype P [P00087856!, digital image], designated by Dy Phon et al. (1994)].—*Desmodium clovisii* Gagnep. in Lecomte, Notul. Syst. (Paris) 3: 258. 1914, nom. illeg. Fig. 1A–C.

Shrub to 3 m tall; stem and twigs terete, glabrous to tomentose. Leaves: stipules triangular, caducous, 4–9 by 2–3 mm, puberulent, margin villose; petioles 0.5–4 cm long, pubescent to tomentose; rachis 3–15 mm long, pubescent to tomentose. Leaflets subcoriaceous; stipels ±triangular, glabrous to pubescent, 1.5–5 by 0.5–3 mm, apex acuminate; petiolules 1–4 mm long, pubescent to tomentose. Terminal leaflet

| 6. Calyx less than 9 mm long. Standard ca. 8.5 by 5–5.4 mm. Wings auriculate on upper side.....                   | <b>3. <i>D. olivaceum</i></b>   |

lanceolate to ovate, obovate or elliptic, 2.5–8 by 1.5–4 cm, apex acute to acuminate, obtuse or rounded, base attenuate to obtuse, margin entire, upper surface puberulent, lower surface pubescent to appressed tomentose; lateral veins 9–18 per side, reaching the margin. *Lateral leaflets* narrowly lanceolate or narrowly elliptic, 2–5.5 by 0.5–3 cm, apex acute to acuminate or obtuse, base asymmetrical, margin entire, upper surface puberulent, lower surface appressed tomentose; lateral veins 6–15 per side, reaching the margin. *Inflorescences* racemose, usually terminal or rarely axillary, 1–2 cm long, with 10–20 flowers; peduncle 3–8 mm long. *Secondary bract* variable in shape and size, 1.5–4 by 0.5–1 mm, apex acute to acuminate, pubescent, margin villose. *Flowers* 10–12 mm long; bracteoles narrowly triangular, 1.5–4 by 0.2–1 mm, apex acute to acuminate, pubescent; pedicels 1–4 mm long, pubescent to tomentose. *Calyx* 4–6 mm long, persistent; each tooth 3–5 mm long, the lowest one longer than the rest, upper one bifid, outside pubescent to tomentose, inside puberulent. *Corolla* white to creamy white; standard obovate, 10–11 by 8–9 mm, apex emarginate, claw 2–2.5 mm long; wings slightly curved, 10–11 by 2–3 mm, apex obtuse, base auriculate, claw ca. 3 mm long, auriculate; keel ca. 11 by 3–3.5 mm, apex narrowly acute or shortly beaked, base auriculate, claw ca. 3 mm long. *Stamens* 11–12 mm long; anthers ca. 1 mm long. *Gynoecium*: ovary oblong, ca. 2 mm long, pubescent; style ca. 11 mm long, puberulent. *Pods* moniliform or laterally compressed, 15–30 by 4–6 mm, indehiscent, lomentaceous, (1–)2–6-articulate, glabrous

to sparsely pubescent, not reticulate; articles 5–7 by 4–5 mm long. *Seeds* light yellow, reniform, 3–3.2 by 2–2.2 mm, with arillate rim.

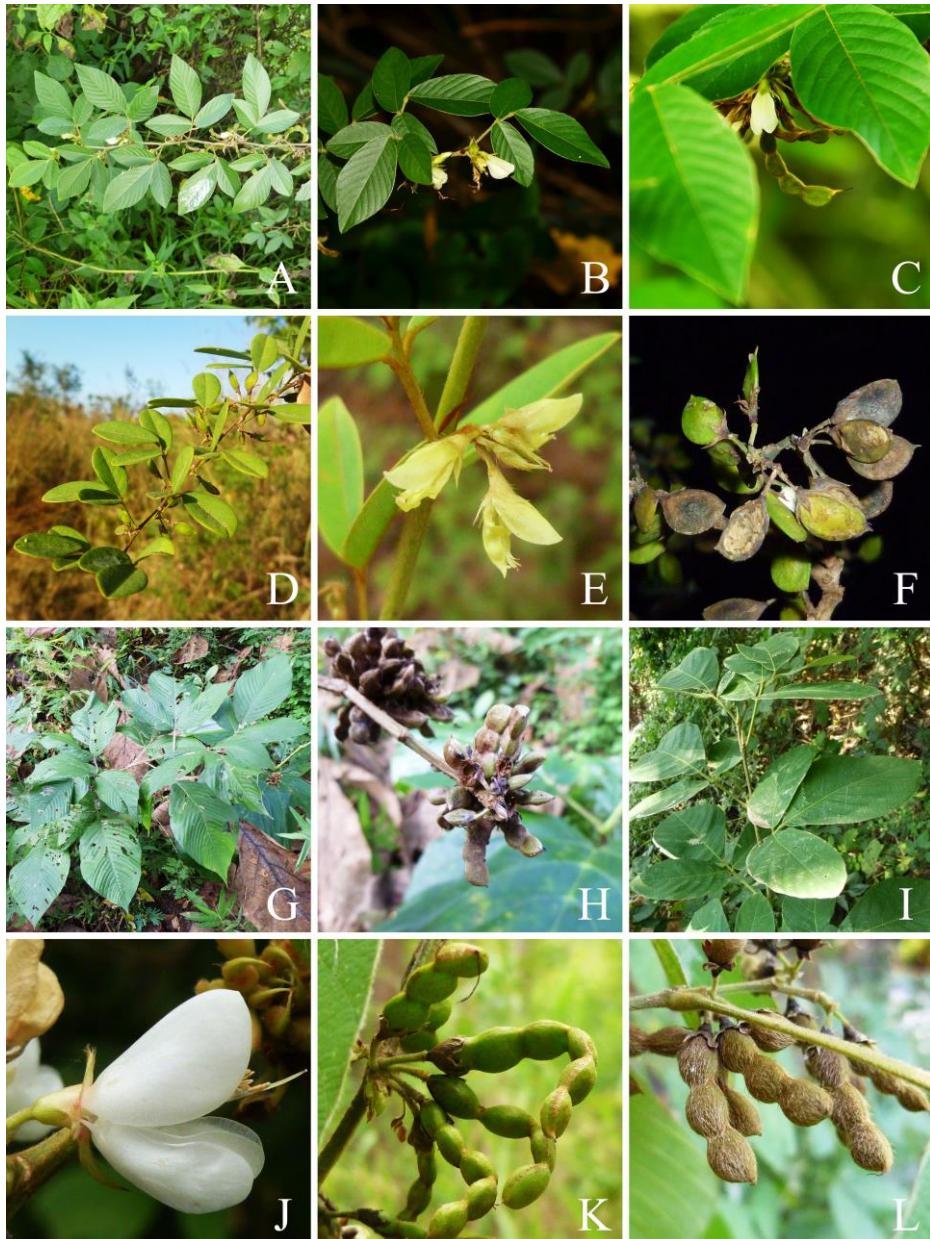

**Thailand.**—NORTH-EASTERN: Maha Sarakham [Kanthalawichai, Walai Rukkhawet Botanical Garden, 15 Dec. 2015, *Muangyen* et al. 429 (QBG)]; EASTERN: Surin [Tha Tum, Thung Kula Ronghai, 7 Aug. 1970, *Sutheesorn* 2059 (BK)]; Si Sa Ket [route to Wang Yai waterfall, 13 Oct. 2012, *Saisorn* 48 (KKU); ibid., 25 Jan. 2014, *Saisorn* et al. 214 (KKU)]; Ubon Ratchathani [Mueang, Bung Siang Tit, 21 Dec. 2008, *Puudjaa & Hemrat* 1522 (BKF-2 sheets)]; SOUTH-EASTERN: Chanthaburi [Nam Tok Taka Mao, 25 Aug. 1972, *Larsen* et al. 31693 (AAU, BKF)]; Sa Kaeo [Aran-yaprathep, 31 Mar. 1962, *Chantanameuk* 125 (BK); ibid., 17 Oct. 1928, *Put* 1995 (BK, BM, K, L, P); ibid., 19 Oct. 1928, *Put* 2050 (ABD, BK, BM, K)]; CENTRAL: Nonthaburi [Pak Kret, 5 Aug. 1923, *Marcan* 1443 (ABD, BM)].

**Distribution.**—Laos, Cambodia, Vietnam.

**Ecology.**—Mixed deciduous forest, swamp forest and roadside near rice field, 150–400 m alt. Flowering: August–October.

**Vernacular.**—Iniao (ីនីោ) (Surin); khi katuet pae (ខីកតុដបោ) (Si Sa Ket); pradam phi (ប្រាតំពី), kok mak khao ki (កកម្មាកខ្សាកី) (Sa Kaeo).

**Notes.**—The pod of *Dendrolobium baccatum* can be either moniliform or laterally compressed. *Desmodium clovisii* Gagnep. is described based on the same original specimens as *D. baccatum* Schindl.

**FIGURE 1.** Photographs of living specimens of genus *Dendrolobium* in Thailand. A.–C. *D. baccatum*: A. Branch with leaves, B. Inflorescence and flowers and C. Flower and fruits; D.–F. *D. lanceolatum* var. *lanceolatum*: D. Branch with leaves, E. Inflorescence and flowers and F. Fruits; G.–H. *D. olivaceum*: G. Branch with leaves and H. Fruits; I.–L. *D. rugosum*: I. Branch with leaves, J. Flowers, K. Fruits (with glabrescent hairs) and L. Fruits (with dense hairs). B and C taken by Teerawat Srisuk and others taken by first author.

2. ***Dendrolobium lanceolatum*** (Dunn) Schindl. in Fedde, Repert. Spec. Nov. Regni Veg. 20: 278. 1924.—*Lespedeza lanceolata* Dunn, J. Linn. Soc., Bot. 35: 488. 1903.

Type: China. Hainan, Nam-Fom-See, *Ford* 372 (lectotype **K** [K000880981!], designated here; isolectotypes **NY** [NY00015684!, digital image], **NY** [NY00015685!, digital image], **US** [US00002252!, digital image]).—*Desmodium lanceolatum* (Dunn) Schindl. ex Gagnep. in Lecomte, Fl. Indo-Chine 2: 572. 1920.—*Lespedeza cambodiana* V.D.Nguyen, Kew Bull. 68: 361. 2013, **syn. nov.** Type: Cambodia. Mondulkiri province, Chida district, Chey Commune, *Du, Regalado, Hoe & Sizemore CB-VN* 636 (holotype **NH**, n.v.; isotypes **K** [K001051586!], **K** [K001051587!] & **K** [K001051588!]). Fig. 1D–F.

Shrub, 1–5 m tall; stem and twigs terete, glabrescent. *Leaves*: stipules triangular, 9–11 by 2–3.5 mm, puberulent; petioles 0.5–2 cm long, puberulent; rachis 5–10 mm long, pubescent. *Leaflets* subcoriaceous; stipels triangular, 4–4.5 by 0.4–0.5 mm, apex acuminate; petiolules 2–2.5 mm long, pubescent. *Terminal leaflet* lanceolate to elliptic, 2.5–8.5 by 0.5–3 cm, apex acute, base obtuse to acute, margin entire, upper surface glabrous to glabrescent, lower surface appressed pubescent; lateral veins 6–9 per side. *Lateral leaflets* narrowly lanceolate, 1.5–6.5 by 0.5–2.5 cm, apex acute, base obtuse, cuneate or asymmetrical, margin entire, upper surface glabrous to glabrescent, lower surface appressed pubescent; lateral veins 5–6 per side. *Inflorescences* racemose, terminal or axillary, 1–1.5 cm long, with 13–15 flowers; peduncle 2–6 mm long. *Secondary bract* ovate, ca. 2 by 0.6 mm. *Flowers* 10–12 mm

long; bracteoles ovate, 2–3 by 0.5 mm, apex acuminate, pubescent; pedicels 2.5–3.5 mm long, puberulent. *Calyx* light green, connate, 5.5–7 mm long, persistent; the lowest being tooth the longest, outside puberulent, inside puberulent. *Corolla* white to yellowish white; standard obovate to elliptic, 9.5–9.8 by 5.5–5.6 mm, apex emarginate, base attenuate, claw ca. 2 mm long; wings oblong, 6.2–8 by 1.5–2 mm, apex obtuse, claw ca. 1.8 mm long, auriculate; keel 11.2–11.5 by 2.8–3 mm, apex beaked, base auriculate, claw ca. 3 mm long. *Stamens* 9–11 mm long; anthers ca. 0.6 mm long. *Gynoecium*: ovary ca. 1 mm long; style ca. 10 mm long. *Pods* laterally compressed, 1-articulate, puberulent, reticulate. *Seeds* yellow to light brown, reniform, 4–4.3 by 2–2.4 mm, with arillate rim.

Two varieties distributed in China, Thailand and Indo-China. Both indigenous to Thailand.

## 2.1 var. *lanceolatum*

PENINSULAR: Chumphon [Sapli, 26 May 29, Hanift & Nur 4270 (**BM, K**)].

**Distribution.**— China, Laos, Vietnam, Cambodia.

**Ecology.**— Oak forest, mixed deciduous and dry dipterocarp forests, rice field, 15–1000 m alt. Flowering: April–January.

**Vernacular.**— Duk ueng (ຊຸກອົ່ງ) (Chaiyaphum, Loei); kham phi lek (ຫາມຜີເລື້ກ) (Phetchabun); klaep nu (ແກລບໜູ), klaep hu nu (ແກລບໜູ), praeng hu nu (ແປຮງບໜູ) (Prachin Buri); kraduk khat (ກະຊຸກເຂືດ) (Mukdahan, Nakhon Phanom); kraduk ueng (ກະຊຸກອົ່ງ) (Nakhon Sawan, Nong Bua Lam Phu, Nong Khai, Ratchaburi, Tak); kraduk ueng yai (ກະຊຸກອົ່ງໃຫຍ່) (Nakhon Ratchasima); phak duk ueng (ຜັກຊຸກອົ່ງ) (Mukdahan); ueng yai (ອົ່ງໃຫຍ່) (Central, Northeastern).

**Notes.**— The holotype at NH and the isotype at K were cited in the original description of *Lespedeza cambodiana*, but there are three duplicates at K, one of which is labelled as holotype and the other two as isotypes. Here we therefore follow the original publication.

2.2 var. *microcarpum* H.Ohashi, Ginkgoana 1: 65. 1973. Type: Thailand. Near Wang Chao (Raheng), 12 Nov. 1920, Kerr 4568. (holotype **BK** [BK258003!]; isotypes **AAU!**, **ABD!**, **BM** [BM000839665!], **K** [K000880971!]).

**Thailand.**— NORTHERN: Lampang [Mae Tha, Mae Tha village, 18 Oct. 2010, *Maxwell 10-33* (**QBG**)]; Thoen, Wiang Mok, 20 Nov. 2014, *Norsaengsri 11655* (**QBG**)]; Tak [Wang Chao, 12 Nov. 1920, Kerr 4568 (holotype **BK**; isotypes **AAU**, **ABD**, **BM**, **K**)]; Kamphaeng Phet [Ban Nam Tok, Khao Son Kamphaeng Phet, 24 Nov. 1977, *Phengklai et al. 3904* (**BKF-2 sheets**, **PSU**)]; NORTH-EASTERN: Loei [Phu Kradueng, Tat Hong, 22 Nov. 2007,

*Norsaengsri 3090* (**QBG**)]; EASTERN: Nakhon Ratchasima [Pak Chong, Chantuek, 1 Sept. 1924, Kerr 9106 (**AAU**, **ABD**, **BK**, **BM**, **E**, **K**)].

**Distribution.**— Endemic to Thailand.

**Ecology.**— Mixed deciduous and bamboo forests on limestone mountains, 100–400 m alt. Flowering: around August.

**Vernacular.**— Klaep nu lek (ແກລບໜູເລື້ກ) (General).

**Notes.**— This variety has smaller pod articles than the typical variety.

3. *Dendrolobium olivaceum* (Prain) Schindl. in Fedde, Repert. Spec. Nov. Regni Veg. 20: 279. 1924.— *Desmodium olivaceum* Prain, J. Asiat. Soc. Bengal, Pt. 2, Nat. Hist. 66(2): 389. 1897. Type: Myanmar. Upper Burma, Chindwin Hills, 8 Sept. 1890, Prazer 370. (lectotype **K** [K000880978!], designated by Ohashi (1973); isolectotype **K** [K000880979!]). Fig. 1G–H.

Shrub 0.5–1 m tall; stem and twigs silvery tomentose. Leaves spirally arranged; stipules oblong, 15–20 by 3–5 mm, silvery tomentose; petioles 3–7.5 cm long, silvery tomentose (hairs 1.5 mm long); rachis 0.5–3 cm long, silvery tomentose. Leaflets subcoriaceous; stipels triangular, pubescent; petiolules 3–5 mm long, silvery tomentose. Terminal leaflet lanceolate to ovate, 5–25.5 by 3.5–13 cm, apex acuminate to attenuate, base acute to obtuse, margin entire, upper surface glabrous to glabrescent, lower surface puberulent to silvery tomentose; lateral veins 19–27 per side. Lateral leaflets oblanceolate or elliptic, 8–21.5 by 3.5–10 cm, apex attenuate to acuminate, base rounded or asymmetrical, margin entire, upper surface puberulent, lower surface appressed and silvery tomentose; lateral veins 15–20 per side. Inflorescences racemose, axillary, 1–3 cm long, with more

than 25 flowers; peduncle 2–5 mm long. *Secondary bract* ovate, 3.5–4 by 1–1.5 mm, puberulent. *Flowers* 8–9 mm long; bracteoles linear, 2.4–4 by 0.5 mm, puberulent; pedicels *ca.* 1.5 mm long, appressed pubescent. *Calyx* light green, 6–7 mm long, persistent; each tooth 2–4 mm long, outside pubescent. *Corolla* white; standard elliptic or suborbicular, *ca.* 8.5 by 5–5.3 mm, apex emarginate, base attenuate, claw 2–4.5 mm long; wings oblong, 7.5–8.5 by 1.5 mm, apex obtuse, claw 2–2.5 mm long, auriculate; keel curved, 8.3–9 by 2 mm, apex obtuse, base auriculate, claw 3–3.5 mm long. *Stamens* 8–9 mm long; anthers *ca.* 0.6 mm long. *Gynoecium*: ovary 1.5–1.8 by 0.5 mm long, puberulent; style 7.5–8 mm long. *Pods* oblong, 10–20 by 4.5–5 mm, (1–)3(–4)-articulate, tomentose, not reticulate; articles 5–6 mm long. *Seeds* dark brown to black, reniform or rectangular, 2.1–3.1 by 2.3–3.2 mm, with arillate rim.

**Thailand.**— NORTHERN: Chiang Mai [Chiang Dao, 16 Sept. 2006, *Maxwell* 06-663 (**CMUB**, **QBG**); *ibid.*, Doi Chiang Dao Wildlife Sanctuary, 8 Nov. 2013, *Clark et al.* 355 (**K**); *ibid.*, foothill of Doi Chiang Dao, 11 Sept. 1967, *Tagawa et al.* T-9799 (**BKF**-2 sheets, **L**, **P**)]; Phayao [Phu Sang National Park, 16 Sept. 1997, *Chueachom s.n.* (**BKF**)]; Lampang [Ban Pang Ra, 20 Dec. 1973, *Chaloenphol* 404 (**BKF**, **P**)]; Chae Son National Park, 20 Oct. 1995, *Maxwell* 95-925 (**CMUB**); Huai Tak, Doi Pang La, 25 Sept. 1967, *Shimizu et al.* T-10815 (**BKF**, **L**)]; Phrae [Song, Mae Yom National Park, 13 Oct. 1991, *Maxwell* 91-896 (**E**, duplicate 5, sheet 1), **P**)]; Tak [Mae Sot, 7 Nov. 2012, *Saisorn* 64 (**KKU**); Umphang, Ta Ko Bi cave, 17 Sept. 2003, *S.N.* (**KKU**); *ibid.*, Ti Lo Su waterfall, 9 Nov. 2012, *Saisorn* 71 (**KKU**)]; NORTHEASTERN: Loei [Phu Kradueng, 12 Oct. 1967, *Prayad* 1019 (**BK**)].

**Distribution.**— Myanmar.

**Ecology.**— Mixed deciduous forest, 400–825 m alt. Flowering: September–November.

**Vernacular.**— Khao mai lek (ချော်မှော်လိုက်) (General).

4. *Dendrolobium rugosum* (Prain) Schindl. in Fedde, Repert. Spec. Nov. Regni Veg. 20: 279. 1924.— *Desmodium rugosum* Prain, J. Asiatic Soc. Bengal, Pt. 2, Nat. Hist. 66(1): 137. 1897. Type: Malaysia. Kedah, Langkawi, *Curtis* 2550 (isotype **K** [K000880973!]).— *Desmodium wallichii* Prain, J. Asiatic Soc. Bengal, Pt. 2, Nat. Hist. 66(2): 388. 1897. Type: Myanmar. Upper Burma, *Wallich* 5687B (lectotype **K-W** [K001121731!], designated here; isolectotypes **K** [K000880-975!] & **K** [K000880976!]).— *Dendrolobium wallichii* (Prain) Schindl. in Fedde, Repert. Spec. Nov. Regni Veg. 20: 279. 1924.— *D. rugosum* var. *moniliferum* H.Ohashi, Ginkgoana 1: 74. 1973. Type: Myanmar. Nov. 1902, *Mokim* 644 (holotype **CAL**, n.v.; isotype **P** [P00088050!, digital image]), **syn. nov.** Fig.1I–L.

Shrub, 1–4 m tall; stem and twigs glabrescent to pubescent. *Leaves*: stipules ovate, 4–7 by 3.5–4 mm, pubescent; petioles 2–7 cm long, pubescent; rachis 0.5–2.5 mm long, pubescent; stipels linear, 3–7 by 0.5 mm; petiolules 2–5 mm long, pubescent. *Terminal leaflet* broadly oblanceolate or obovate, 4.5–18.5 by 2–5.5 cm, apex acute to acuminate or obtuse, base cuneate, margin entire, upper surface puberulent, lower surface appressed puberulent; lateral veins 9–13 per side. *Lateral leaflets* narrowly elliptic to oblong, 3–14.5 by 1–8 cm, apex acute to obtuse, base asymmetrical, margin entire, upper surface puberulent, lower surface appressed puberulent; lateral veins 7–11 per side. *Inflorescences* racemose, terminal or axillary, 1–1.5 cm long, with

10–15 flowers; peduncle 2–5 mm long. *Secondary bract* triangular, 2.2–2.5 by 1.2–1.5 mm, apex acute, hairy. *Flowers* 10–12 mm long; bracteoles narrowly triangular, 2–3 by 0.7–1 mm, apex acuminate, puberulent; pedicels 2.5–4 mm long, pubescent. *Calyx* light green to brown, 5–7 mm long, persistent; each tooth 1.5–4 mm long, outside puberulent. *Corolla* white; standard ovate or suborbicular, 9.5–11 by 8.5–10 mm, apex emarginate (distinctly 2-lobed, ca. 1 mm), claw 2–2.5 mm long; wings oblanceolate to narrowly obovate, 9.5–11 by 2.5–3.5 mm, apex obtuse, base auriculate, claw 2–3 mm long; keel narrowly obovate, 9.5–11 by 3–3.5 mm, apex obtuse, base auriculate (ca. 0.5 mm long), claw 2–4 mm long. *Stamens* 8–11 mm long; anthers 0.8–1 mm long. *Gynoecium*: ovary 1.5–2.5 mm long; style 8.5–11.5 mm long. *Pods* moniliform or laterally compressed, 10–40 by 4–6 mm, indehiscent, lomentaceous, (1–)3–6-articulate, pubescent, not reticulate; articles 5–7 mm long. *Seeds* reniform, ca. 3.5 by 3 mm, with arillate rim.

**Distribution.**— Myanmar, China (Yunnan), Laos, Cambodia, Vietnam, Peninsular Malaysia.

**Ecology.**— Dry dipterocarp, dry evergreen, mixed deciduous and lower montane oak and lower montane coniferous forests, 0–1260 m alt. Flowering: May–October.

**Vernacular.**— Kanin nang (ကနိမ်နှင့်), thao khimin (ເຄົ້າຂົມ່ນ) (Kanchanaburi); kham phi (ໝາມຜີ) (Loei, Phetchabun); thao khamin (ເຄົ້າໜິນ) (Kanchanaburi, Phetchabun).

**Notes.**— *Dendrolobium rugosum* var. *moniliferum* is synonymized due to the overlapping character with the typical variety such as the pod character (moniliform or laterally appressed). Examination of the type and other materials of var. *rugosum* and var. *moniliferum* showed that the differences between these varieties are small and

unreliable, so that they are best united under *Dendrolobium rugosum*. A similar variation of the pod is also found in another species, *Dendrolobium baccatum* as mentioned above.

**5. *Dendrolobium thorelii*** (Schindl.) Schindl. in Fedde, Repert. Spec. Nov. Regni Veg. 20: 279. 1924.— *Desmodium olivaceum* Prain var. *thorelii* Schindl. in Engl., Bot. Jahrb. Syst. 54(1): 60. 1916. Type: Cambodia. Stung Streng, 1866–1868, *Thorel s.n.* (lectotype P [P00088064!, digital image], designated by Dy Phon et al. (1994)).— *Desmodium thorelii* (Schindl.) Gagnep., Notul. Syst. (Paris) 3: 259. 1916. Fig. 2A–C.

Shrub, 1–5 m tall; stem and twigs triangular, silvery tomentose. Leaves spiral or subalternate; stipules narrowly triangular to obovate, 25–45 by 6–10 mm, silvery tomentose (1–2 mm long); petioles 3.5–10 cm long, silvery tomentose (2–5 mm long); rachis 0.5–2.5 mm long, silvery tomentose (2–5 mm long). Leaflets subcoriaceous; stipels narrowly triangular, 5–20 by 0.8–2 mm, apex acuminate; petiolules 4–12 mm long, silvery tomentose (2–5 mm long). Terminal leaflet broadly elliptic to broadly lanceolate, 11–33.5 by 5.5–18 cm, apex acuminate to attenuate, base cuneate to obtuse, margin entire, upper surface glabrescent to puberulent, lower surface appressed, silvery tomentose; lateral veins 16–25 per side. Lateral leaflets elliptic to obovate, 11–33.5 by 5.5–18 cm, apex acuminate to attenuate, base asymmetrical, margin entire, upper surface glabrescent to puberulent, lower surface appressed, silvery tomentose; lateral veins 15–23 per side. Inflorescences racemose, terminal, 2–3 cm long, with more than 30 flowers; peduncle 5–15 mm long. Secondary bract curved, 6–11.5 by 1–4.5 mm, with silvery hairs. Flowers ca. 10 mm long; bracteoles curved,

5–7 by 0.5–1.5 mm, with silvery hairs; pedicels 4–7 mm long, with silvery hairs. Calyx light green to brown, 9.5–11 mm long, persistent; each tooth 3.5–9 mm long, outside silvery hairy. Corolla white; standard ±orbicular, 11–11.2 by 7.5–8.5 mm, apex obtuse, claw 3–3.5 mm long; wings slightly curved, 8.3–12 by 2.5–3.5 mm, apex obtuse, base auriculate (on both sides), claw 3–3.6 mm long; keel curved, 10–11 by 2.5–3 mm, apex obtuse, base auriculate, claw 3.5–4 mm long. Stamens 10–11 mm long; anthers ca. 1 mm long. Gynoecium: ovary 2–2.5 mm long, silvery hairy; style 9.5–12 mm long. Pods laterally compressed, curved, 8–27 by 4–6 mm, indehiscent, lomentaceous, (1)4–5-articulate, silvery tomentose, not reticulate; articles 3–5 mm long. Seeds reniform, 2.5–4.5 by 2.5–3.5 mm, with arillate rim.

**Distribution.**— Africa, Sri Lanka, India, Myanmar, Japan (Ryukyu Islands), Cambodia, Vietnam, Malaysia, Indonesia, Philippines, New Guinea, Pacific islands, Australia.

**Ecology.**— Seashores and mangrove forest, 0–55 m alt. Flowering: April–November.

**Vernacular.**— Cha maep (ชาแมป), thua rae thale (ทูาระทะล) (Trat); khamin nang (ขึ้นนาง) (Chanthaburi); na nuan (นาบาน) (Songkhla).

**Notes.**— *Dendrolobium umbellatum*, the only species of genus is restricted to coastal areas.

## ACKNOWLEDGEMENTS

We would like to thank curators, directors, and staff of all herbaria for their kind helps during our study. The authors gratefully acknowledge the financial support from Walailak University under grant WU63230, and the Carlsberg Foundation, Aarhus University, Denmark. This study was partially supported by the Research Center of Excellence in Innovation of Essential Oil, Walailak University, Thailand. We would also thank to Dr. Teerawat Srisuk

and Mr. Ponprom Pisuttimarn for providing photos of some species.
